Kateryna Skoryna

Frontend-Focused Full-Stack Developer
React · TypeScript · Node.js · AI-Powered Products

Berlin, Germany **k.skoryna@gmail.com** **LinkedIn** **GitHub**

I'm a frontend-focused full-stack developer who owns the full product cycle, from user interviews to production. I specialize in web performance optimization and accessibility, and I design multi-tenant systems with OAuth 2 and JWT-based access control. My stack is React, TypeScript, Node.js and PostgreSQL with CI/CD, and I integrate LLM-powered features with validated output. Product-minded and independent, I'm passionate about deep-tech products that advance sustainability and the energy transition.

SKILLS

Frontend: React · TypeScript · JavaScript · Next.js · Material UI · Zustand · Vite · Recharts · Sass · Tailwind CSS · Mapbox · Responsive Design · Accessibility · Core Web Vitals · State Management

Backend & Data: Node.js · NestJS · PostgreSQL · TypeORM · REST APIs · MongoDB · Prisma · Zod · Firebase Auth · claims-based authorization, RBAC, multi-tenant

AI / Automation: Gemini API · OpenAI API · Prompt Engineering · LLM-as-Judge Evaluation · Claude Code · Codex · Cursor · Python · n8n

Quality & Delivery: Jest · Cypress · Magnitude AI (Playwright-based) · GitLab CI/CD · GitHub Actions · Docker · Performance Optimization

Tooling: Vercel · GCP (Cloud Logging) · Figma · Jira

WORK EXPERIENCE

Frontend Developer · Sono Solar GmbH

Remote (Munich, Germany) **Jul 2024 – Aug 2026**

- **Frontend performance:** Led a performance overhaul of the React/Vite Solar Analytics Dashboard (10+ fleets) in a team of 5: desktop LCP from 8.2 s to 1.7 s (Core Web Vitals) and 65% less JavaScript on pages without charts (518 kB to 180 kB), through bundle analysis, code splitting and lazy-loaded Recharts. Raised accessibility (Lighthouse) from 88 to 100.
- **Data loading:** Cut the dashboard's full load time from 6.91 s to 1.17 s and its transfer size from about 765 kB to under 300 kB by splitting one combined request into three, adding server-side pagination and rendering tiles ahead of their data with Zustand state management.
- **Component library and live map:** Built ~25 reusable, responsive React/TypeScript components from the team's design system and Figma specs, shared across the fleet dashboard and the Installation Tool, plus Recharts analytics and a live Mapbox vehicle map.
- **Backend, authorization and security:** Built the access layer of a multi-tenant B2B platform: claims-based roles (OEM, fleet, user) scoping every data request to the user's fleet across two products, and an email one-time-code login with single-use, time-limited codes, attempt limits and sessions. Node.js, TypeORM and PostgreSQL with migrations, validation and Jest tests, plus 30+ end-to-end flows with Magnitude AI in GitLab CI/CD.
- **Product ownership:** Ran user interviews and usage analysis for an installation workflow and built the frontend of the Installation Tool, now running on three OEM production lines.
- **AI in development:** Used Claude Code, Codex and Cursor day to day, working with skills, git worktrees and agent loops, and reviewing all generated code manually before release.

Frontend Developer (Contract) · HarnoSoft LLC

Remote (Lviv, Ukraine) **Sep 2023 – Jun 2024**

- Built responsive, mobile-first React interfaces for a B2C educational platform with Material UI and reusable components across desktop, tablet and mobile.
- Refactored parts of a legacy frontend codebase and translated Figma designs into consistent cross-browser interfaces (Chrome, Firefox, Safari).

PROJECTS

QuizDOM

Live demo **Code**

React · TypeScript · Firebase · Genkit · Gemini API · Zustand · Vite

Built and deployed a full-stack AI quiz platform with schema-validated Gemini generation, semantic quiz search (embeddings and Firestore vector search) and an admin lab where a second Gemini model scores generated quizzes. Implemented Firebase Authentication and per-user data isolation via Firestore Security Rules, with TanStack Query and Zustand on the client.

TaskPal

Live demo **Code**

React · TypeScript · Nx · NestJS · MongoDB · Jest · Cypress · Vercel · GitHub Actions

Built a full-stack task management app with an AI-powered chatbot, authenticated REST APIs and shared Zod validation schemas. Deployed on Vercel; set up GitHub Actions and Docker for automated testing and deployment.

Solar Calculator

Live demo **Code**

Next.js · React · TypeScript · PostgreSQL · Prisma · NextAuth · Jest

Built a multi-tenant web app that helps commercial fleet operators evaluate solar panel investments for buses, trucks, vans and trailers. Implemented fleet-scoped authorization, audit logging, rate limiting and passwordless sign-in (Google or email link), covered by Jest tests; UI in English, German and Spanish.

EDUCATION & LANGUAGES

- **WBS Coding School** – AI Agents and Automation, 12-week AZAV-certified program · Berlin · Jun – Sep 2026
- **ReDI School of Digital Integration** – Advanced React, 3-month program · Munich
- **GoIT Academy** – Full-Stack Software Developer, 12 months · Kyiv, Ukraine
- **Kyiv National Aviation University** – Master's Degree, Transport Engineer · Kyiv

Languages: English (C1) · German (B2, progressing toward C1)
